Sync between Desktop, Laptop

Sun, 02/27/2011 - 10:26 — cjohnstone
Hi!

I have been using the trial version and want to upgrade to pro but want to be sre there is a fix for this issue before spending the $$.

I did a bunch of set-up work on my desktop and while away on business realized the setup was incorrect so I sepnt a buch of time editing projects, focuses, tasks, subtasks, etc.

I am back to the office now and when I open Outlook on this machine all the work I did on my laptop is not there save a couple of project files. None of the new projects, focuses, filtered tasks, sub tasks made the transition to the desktop. I have looked repeatedly for some help as to the correct set-up for sync between the two machines via exchange and it looks like it should just do it. Any help would be appreciated!
